

Explain why these statements are wrong

Name

Statement	Why was it wrong?
A database can only be stored on a computer	
A record contains one piece of data about a person or thing	
All of the records in a database are stored together in a field	
You already know the correct answer to a hypothesis before you begin collecting data	
The best way to analyse large quantities of data is by looking at it in a very big table	
The design of a questionnaire doesn't really matter – people will fill them out anyway	
This is a good example of an open question: Which superhero are you: <ul style="list-style-type: none">• Batman• Spiderman• Superman• Incredible Hulk	

You may:

- Guide teachers or students to access this resource from the teach-ict.com site
- Print out enough copies to use during the lesson

You may not:

- Save this resource to a school network or VLE
- Adapt or build on this work

A subscription will enable you to access an editable version and save it on your protected network or VLE
